

What could your company do with 800 hours back?

Find one repeated workflow, measure the capacity worth examining, and decide whether AI, ordinary automation, a process change, or no project is the right answer.

OPEN THE CALCULATOR

1 - NAME THE WORKFLOW

Repeated task or customer workflow

Business owner

2 - CALCULATE THE CURRENT LABOR

Times the task happens each month

Minutes each staff member spends

Staff members involved each time

Loaded hourly staff cost

MONTHLY HOURS

occurrences x minutes x people / 60

ANNUAL HOURS

monthly hours x 12

ANNUAL LABOR COST

annual hours x hourly cost

\$

3 - COUNT WHAT LABOR MISSES

Use conservative numbers: qualified leads that wait, estimates without a next action, incomplete intake, rework, delays, no-shows, and slow approvals.

Annual lost contribution margin

Annual rework, delay, or risk cost

4 - APPLY THE 10X TEST

\$1,000 MAP

Seek \$10K+ opportunity

Qualification threshold - never a guaranteed return.

\$9,500 PILOT

Seek \$95K+ opportunity

\$25,000 ROLLOUT

Seek \$250K+ opportunity

5 - DECIDE WHAT MUST STAY HUMAN

Mark steps involving safety, money, sensitive data, unusual exceptions, consequential decisions, or a customer who needs empathy and judgment.

Human approval points

A useful next step

Send the workflow name to start@primemindai.com. If the economics do not support a project, we will say so.
